

Client: Care South

Sector: Charity and Not for Profit

Care South is a leading provider of residential and home care across the South of England.

The challenge

Care South wanted to bring their servers back in-house while retaining the high level of availability required of their computer network.

The solution

Enhanced recommended a two phase project. The first phase was to bring their existing equipment in-house, the second phase was to provide a fully virtualised server environment with disaster recovery hosted at Enhanced's offices.

The results

Care South now has total confidence in their computer network. Enhanced manages their entire core server and communication infrastructure and also act as consultants for all their IT requirements.

The benefits

- **High availability of servers**
- **Flexibility when implementing new technology**
- **Faster, and more reliable systems**
- **Greater security of sensitive data**
- **Dedicated support team at Enhanced**
- **A focussed and planned IT strategy.**

“We have total trust in Enhanced who fully understand the sensitivity of our business. Working with them is like having our own in-house IT team. I would have no hesitation in recommending them to others.”

Carolyn Collins,
Director of Domiciliary Care,
Care South
